

## THE ULTIMATE CAT FLAP HAS FINALLY ARRIVED!

Catflaps are very convenient in that they allow your cat (or cats) to enter and benefit from the warmth and shelter of your home, and at the same time, allow them to exit for fresh air, exercise and toileting. And you don't have to be present to let them in and out!

But they have one big disadvantage – they allow other cats in as well. A “foreign” cat that has entered your house may take the food of, and stress out the resident cats, and there is always the possibility that it may also urinate inside the house – not a pleasant occurrence!

To try and solve this problem, manufacturers have come up with a range of “entry controlled” catflaps which require the cats to wear a collar incorporating a magnet or an infra red device. The downside of these catflaps is simply the fact that the resident cats have to wear a collar holding the triggering device. Many cat owners (including ourselves) prefer their cats not to wear collars as collars can be dangerous if caught on tree branches and other items. In addition, if the collar comes off the cat or if the triggering device comes off the collar, then the cat cannot gain entry to the house. Not desirable if you are away all day and the weather is freezing cold!

But now, the cat flap that all cat owners have been waiting for has finally arrived! It is called the PetPorte. And the clever thing is that **IT IS TRIGGERED BY THE MICROCHIP INSIDE YOUR CAT** – so it does not need to wear a collar! And you can even set the PetPorte so that your cat cannot go out at night - it has a light sensor that only opens the catflap during daylight hours!

It is a simple matter to initially programme in your cat (or cats) and up to 31 cats can be programmed in. (So if you plan to have 32 cats, you have a problem!).

We have trialled the PetPorte ourselves to test its effectiveness and reliability and it is absolutely brilliant!

You can check it out by clicking the link [www.PetPorte.com](http://www.PetPorte.com)

Conventional catflaps cost £30-£50. Considering the technology that it contains, the PetPorte is fantastic value at around a (recommended) price of around £92. However, by clicking the following link it can be purchased from as little as £73.99 (at EasyAnimal.co.uk):
